Define Problem Statements (Customer Problem Statement Template)

Express the travel-planning problem from the customer's point of view. The statements below are design hypotheses based on the project's intended users.

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A solo traveler planning a short break.	Build an affordable day-by-day trip.	Research is scattered and takes too long.	Places, meals and transport must be arranged manually.	Overwhelmed and uncertain.
PS-2	A couple planning a getaway.	Balance interests and travel pace.	Generic itineraries miss our preferences.	Plans rarely combine style, budget and practical needs.	Frustrated by compromises.
PS-3	A traveler arranging a small-group trip.	Keep everyone informed about one plan.	Trip details are split across messages.	There is no simple shared timeline or calendar export.	Anxious about coordination.

Focused Problem Statement

Solo travelers, couples and small groups need a faster way to turn travel preferences into a clear daily schedule. Manual research and generic travel lists make it difficult to combine activities, dining and transport into an editable, shareable plan.

Project Response

Waypoint combines curated itinerary templates with an AI-assisted trip builder, saved preferences, a day timeline, trip editing, public links and calendar/text exports.
