Customer Journey Map

Map the intended experience from choosing a destination to using a saved itinerary. Customer thoughts and feelings are design hypotheses.

Phase of Journey	**Stage 1: Discover**	**Stage 2: Build**	**Stage 3: Use**
Actions	Browse destinations; open curated trip details; compare options.	Enter dates, budget and preferences; generate or clone an itinerary.	Review daily stops; adjust activities; share or export the plan.
Touchpoint	Home, Explore, template detail and Ideas screens.	Register/login, Preferences and Custom Trip Builder.	My trips, TripDetail, public ShareView and calendar export.
Customer Thought	Which destination and template suit this trip?	Will this plan fit my pace, interests and practical needs?	Can I adjust the schedule and keep my companions informed?
Customer Feeling	Curious, with some uncertainty about choices.	Hopeful; waiting for a clear, personalized plan.	More prepared and confident after reviewing the itinerary.
Opportunities	Add broader destination coverage and clearer estimate labels.	Improve constraint checking, input guidance and generation feedback.	Verify transfer times; add offline access and collaborative editing later.
